

*A unique software tool that audits and analyzes Medicare Conditions of Participation (CoP) compliance.*

The CMS final rule on the new Conditions of Participation (CoPs) for home health care agencies participating in the Medicare program are demanding that agencies meet high QAPI standards.

Many agencies may not understand what is required to bring their agency into compliance with the new CoPs, as the new requirements make ongoing real-time quality monitoring a vital part of agency operations.

SMARTAUDIT® is a tool that helps you create a customized, agency-wide QAPI program to track and trend your record review.

It also creates focused audits and reports to ensure that you can stay ahead of the new regulations.

SMARTAUDIT® will identify areas of non-compliance in real time, enabling agencies to pinpoint deficiencies immediately and develop focused, timely corrective action plans to efficiently succeed with QAPI activities.

With SMARTAUDIT®'s robust automated record review, comprehensive tools and reports, and instant plan of correction, you will be better equipped to maintain compliance and QAPI outcomes throughout your agency, avoid costly fines, and ensure regulatory compliance in addition to quality outcomes.

*I highly recommend SMARTAUDIT. It's an inexpensive, electronic tool that allows us to capture compliance based on the requirements of both CMS and DPH. We are always fully prepared for an audit.*

*Meredith Ferreira,  
Administrator, All Pointe Care*
